

“Interpret a Data Visualization” Report (LinkedIn Dashboard)

“However Data Presentation skill ranked #8 in the top-10 skills, United Kingdom is the only country (from the mentioned 14 countries) mentions it as one of its top needed skills (rank #8 globally, rank #9 in UK). From the dashboard I clicked on “Data Presentation” column, this showed the rank of both Global and United Kingdom.”

“All countries (from the mentioned 14 countries) ranked Statistical Analysis and Data Mining, as one of their top needed skills (Global Rank #2) , (50%) of them ranked it as their 1st needed skill, (0.37%) ranked it as their 2nd most needed skill. From the dashboard I clicked on Statistical Analysis & Data Mining, that showed the rank for each country.”

“Web Development comes at rank #3 globally, but it comes at rank #8 in Australia, South Africa, and US. And at rank #9 in Canada. And not listed at top-10 needed skill in China, France, Germany, Netherlands, and Singapore. So the high global rank may be caused by high-ranks in developing countries. While holding ctrl button I clicked on the dots corresponding to Australia, Canada, South Africa, and United States under Web Architecture & Development Framework column.”
